Risk and change management in complex systems

Proceedings of the 16th International DSM Conference
Paris, France, 2 - 4 July 2014

Dependency and Structure Modelling (DSM) techniques support the management of complexity by focusing attention on the elements of a complex system and how they are related to each other. The DSM perspective can assist in understanding, designing and optimising complex systems - including products, processes and organisations.

This volume comprises peer-reviewed papers representing state-of-the-art in DSM research and applications. The papers were presented at the 16th International DSM Conference held in July 2014 in Paris, France.
