Gain competitive advantage by managing complexity

Proceedings of the 14th International DSM Conference
Kyoto, Japan 2012

Dependency and Structure Modelling (DSM) techniques support the management of complexity by focusing attention on the elements of a complex system and how they are related to each other. The DSM perspective can assist in understanding, designing and optimising complex systems— including products, processes and organisations.

This volume comprises peer-reviewed papers representing state-of-the-art in DSM research and applications. The papers were presented at the 13th International DSM Conference held in September 2011 in Cambridge, MA, USA.

# TABLE OF CONTENTS

Foreword ix

Program Committee xi

## Part I: Application of Matrix Methodology

Formation of the DSM Industry Special Interest Group (DSMISIG) 3

_Hansel A. Stowe, Richard Paynting and Elke Scheweumann_

DSM based knowledge configuration methodology 17

_Toufik Zouadouh, Cyrille Vernier, Nadhir Lebdaa and Samuel Gomes_

Welding process analysis using literature-based Design Structure Matrix 31

_Sebastian Maisenbacher, Ali Yassine, Mohammad El-Zein, Rakesh Goyal and Maik Maurer_

Design for adoptability – Support of upgrade strategies to react to evolving stakeholder needs and requirements 43

_Phillip Schrierhoff and Udo Lindemann_

MDM-based representation of requirement/function relation in the sound design for consumer electronics 53

_Kensichi Seki, Kazuko Yamagishi and Hidekazu Nishimura_

Value and waste dependencies and guidelines 65

_G.T. Syam, K.G.M. Kirner, D.C. Wynn, U. Lindemann and P.J. Clarkson_

Flexibility analysis of a supply chain using Design Structure Matrix 79

_Zehra Yousefi, S.M. Baqer Malaek and Sojood Emamipour_

## Part II: Modelling Approaches and Information Acquisition

Conditional DSM 91

_Cheng-Wen Chang and David M. Chiang_

Finding parameter constraint networks in a product system 101

_Akhiro Hirao, Kazuya Oizumi and Kazuhiro Aoyama_

A port-based approach for modelling the structure of mechatronic modules 111

_Konstantin Kernschmidt, Gülten Baynak and Birgit Vogel-Heuser_

Effective & efficient DSM configuration guidelines for low-cost development of complex systems 125

_Sadegh Mirshekarian B._
Generating a network of information dependencies automatically
Reid R. Seneescu, Austen W. Head, Martin Steinert and Martin A. Fischer

Part III: System Architectures

A matrix-based approach for a qualitative assessment of system architecture specific processes regarding efficiency
Wolfgang Bauer, Hannes Elser and Udo Lindemann

Functional structure based change assessment in product design
Kazuya Ozumi and Kazahito Aoyama

Structural complexity metric for engineered complex systems and its application
Kaushik Sinha and Olivier de Weck

Part IV: Project and Process Management

Handling a Design Structure Matrix based on fuzzy data
Pierre Bonnal, Mathieu Baudin and Jean-Michel Ruiz

Management of relationships between product information on model based design process
Takao Eguchi, Tsuyoshi Koga and Kazahito Aoyama

Using DSM for extracting and analyzing the underlying problems of our projects
Kiyoshi Morita

Integrated modelling of product- and process-related information
Albert Albers, Andreas Braun and Sebastian Salomon

A DSM-based "2.0" system for human intervention planning and scheduling in facilities emitting ionizing radiations
Mathieu Baudin, Pierre Bonal and Jurgen De Jonghe

Designing interoperable lean, agile, resilient and green industrial ecosystems
Ezunildo Cabral and Antonio Grilo

Interplay between product architecture and organizational structure
Kaushik Sinha, Denman James and Olivier de Weck

Part V: Software Engineering

Architecture migration using DSM in a large-scale software project
Takashi Maki

A new approach to component reuse in multi-software development project management by using an information-centric project model
Akihiro Sakaedani, Toshiyuki Yasui, Seiko Shirasaka and Takashi Maeno

Part VI: Civil Engineering

Classifying components based on change propagation potential
Rachael Grimalet, Robert Schmidt III and Simon Austin

Analysing process-oriented BIM execution plan using MDM
Jeroen Jacob and Koshy Varghese

Creating dynamic organizational modularity in lean construction design – Combining MDM and DSM methodology systematically
Tom Reichardt, Fatose Elezi, Iris D. Tommelen and Udo Lindemann

Part VII: Management of Engineering Design Projects

An ontology-representation of the integrated product engineering model
Albert Albers, Andreas Braun and Hannes Schmalenbach

Dependency structure matrix modelling for human resource allocation
Albert Albers, Jan Breitschuh and Quentin Lohmeyer

Stability of collaborative R&D networks: A simulation study
Peter Gust, Nils Atifeld and Jochen Kreutzer

The prediction of erratic states in product development
Mohammad Khaskehdel and Soreed Mansour

Modelling of cooperative work in concurrent engineering projects based on extended work transformation matrices with hidden state variables
Christopher M. Schlick, Sebastian Schneider and Sinke Duckwitz

Simulation of product change effects based on design structure and domain mapping matrices
Sebastian Schneider, Christopher M. Schlick, Markus Röwenstrunk and Susanne Mütze-Niewöhn

Increasing value in development projects using Domain Mapping Matrix
Qing Yang and Ting Lu

Part VIII: Applications of DSM Methodology

The Explainer and its use in engineering
Donald V. Steward

Part I – Continuation: Applications of DSM Methodology

A conceptual approach to improve configuration of a prolonged manned mission spacecraft based on DMS
S.M. Bagher Malaek and Elmir Zohrevandi

FOREWORD

Welcome to the 14th International DSM conference in Kyoto Japan, which represents a major step for our DSM community. Starting in the US more than a decade ago, an additional significantly large member group has been established in Europe. For this reason our conferences were held alternately at locations on both continents in the past.

The DSM community is very lively, which can be seen by different but related activities and impacts. Today, the “Design Structure Matrix” is one of the most popular keywords within the Design Society. This year’s conference tracks, along with a special interest group on structural complexity reflects the broad interest existing in the engineering research community. In addition, a newly established working group focuses on industrial applications and solutions provided by DSM methods. The members of this group want to close the gap between the scientific knowledge and its application for problem solving in the daily business of companies.

Another noteworthy milestone of the DSM community this year was the release of the Design Structure Matrix Methods and Applications book by Steve Eppinger & Tyson Browning, which describes the current state of practice and applications from numerous institutions.

Over the years, the DSM community registered significant growth, and today, we count industry-related as well as scientific members worldwide. This development encouraged us to hold the 14th DSM conference in Japan, which represents the first time ever on the Asian continent! With this step we want to attract new contributors to the DSM methods and the list of authors and conference participants confirms our intention. We are convinced that this event will provide participants new insights, solutions and research focuses on dependency and structure modeling.

At the 2010 DSM Conference, Japan was announced as the next conference venue for 2011. The natural catastrophe in March 2011 made it necessary to change the venue to MIT in Boston, and postpone hosting the event in Japan by one year. Now, ISID feels honored to be the local host of the 14th International DSM conference. ISID has developed a DSM-based software for new product development and is one of the major CAD and PLM solution providers in the world. The strong focus on industrial solutions and the home base in Japan is helping us to attract new members for the DSM community.

With two days of sharing all of the discoveries and challenges on recent scientific and industrial development in the community, we believe this year’s conference will be remembered as a major milestone on dependency and structure modeling.

We wish you a fruitful conference in Kyoto!

Moritoyo Onishi and Maik Maurer

Moritoyo Onishi and Maik Maurer
ORGANIZING COMMITTEE

Morio Onishi, ISID - Information Services International-Dentsu Ltd., Tokyo, Japan
Dr. Maiik Maurer, Technische Universität München, Munich, Germany
Katharina Kirner, Technische Universität München, Munich, Germany
Professor Udo Lindemann, Technische Universität München, Munich, Germany

PROGRAM COMMITTEE

All contributions in these proceedings have undergone a rigid review process. We would like to cordially thank all reviewers for their invaluable support.

Professor Yaneer Bar-Yam, New England Complex Systems Institute, USA
Wieland Biedermann, Technische Universität München, Munich, Germany
Professor Eric Bonjour, Institut Femto-ST / Département AS2M, France
Professor Tyson Browning, Texas Christian University, USA
Professor Mike Danilovic, Jönköping International Business School, Sweden
Professor Olivier de Weck, Massachusetts Institute of Technology, USA
Ramy El Behery, Shell Canada Ltd., Canada
Professor Steven Eppinger, Massachusetts Institute of Technology, USA
Katharina Kirner, Technische Universität München, Munich, Germany
Professor Andrew Kasnak, The University of Iowa, USA
Professor Udo Lindemann, Technische Universität München, Munich, Germany
Dr. Maiik Maurer, Technische Universität München, Munich, Germany
Paschal Minogue, Analog Devices B.V., Ireland
Richard Paynting, ProjectDSM Pty Ltd, Australia
Harold Stowe, The Boeing Company, USA
Professor Koshy Varghese, Indian Institute of Technology, Madras
Frank Waldman, Lattix Inc., USA
Dr. Daniel Whitney, Massachusetts Institute of Technology, USA
Dr. David Wynn, University of Cambridge, UK
Professor Ali Yassine, American University of Beirut, Lebanon

The International DSM Conference is an endorsed event of the Design Society.
